

ZhiyuanZhang

BUPT&QMUL STUDENT

2006/08

13586260540

2024213739@bupt.cn

Education Situation

1. Academic Performance

- GPA: 3.85, ranking 5th in Information and Computing Science (ICS)
- College English Test-6 (CET-6): 578, top 10% in Hainan Province

2. Other Skills

Machine Learning: Skilled in Pytorch, Convolutional Neural Network and Compressive Sensing; Vibecoding in tackling agents' performance evaluation.

Activity Experience&Social Practice

Conversational English 2025/02 - 2025/05

This is a really meaningful class.I participated in it with several students sitting in a circle and talked with each other in English, which was truly an excellent way to improve my oral English skills.

Technical Language and Academic Study Skills II 2025/02 - 2025/06

I took part in this class last year. There were three people in my group and I was responsible for designing the structure of the mind map each week. Through our teamwork and cooperation, our mind map won the best award in the final.

Academic Communication Skill 1 2025/09 - 2025/12

In this class, I've tried to deliver two presentations in English. Both of my presentations were wonderful and full of body languages. I finally got 96 in this class.

Competition Experience

- First Prize, Hainan Provincial Collegiate Mathematics Competition(CMC)
- Second Prize, Hainan Provincial Mathematical Modeling Competition

Personal Advantages of going on Winter Trip

I am particularly interested in AI agents and robotics, especially how intelligent agents perceive their surroundings, make autonomous decisions, and cooperate in dynamic environments. The robot soccer challenge has further inspired my curiosity about how multiple agents can coordinate their movements, develop effective strategies, and make real-time decisions under uncertainty.
Through WinterHack, I hope to deepen my understanding of the connection between AI algorithms and real-world robotic applications, while gaining more hands-on experience in designing and improving intelligent systems. I am also excited about the opportunity to visit Queen Mary University of London and collaborate with students from different backgrounds, exchange ideas, and explore new approaches to robotics and AI. I believe this experience will broaden my perspective and help me better understand the future possibilities of intelligent agents.
